

Beta Water Samplers, Horizontal Acrylic.

Kit - Includes carry case, Transparent acrylic, 2.2L

- Large volume - from 2.2 to 8.2 liters
- No metal parts to touch your sample
- Kits include bottle, plastic carry case, 45-B10 messenger & 62-C15 line (100 ft.)
- Bottles & bottles with cases also available

Intended for shallow or deep waters, these bottles are called “horizontal” because they descend, parallel to the

bottom. They are pulled sideways just before closing by the operator. This ensures a representative water sample

for that specific depth.

They are ideal for sampling at the thermocline, at other stratification levels, or just above the bottom sediments.

These popular and versatile bottles come in your choice of transparent acrylic or opaque PVC. PVC is more durable

and less costly, but the acrylic allows you to view the bottle contents immediately.

Designed for trace metal sampling. Also may be used for organic sampling to concentrations of mg/L. When

running metal, organic, or any other chemical analyses, it is best to run a blank on the sampler prior to use.

This sampler requires a messenger and line (not included, except in kits) for operation. A thermometer can be mounted inside acrylic Beta bottles.
